TO BE TRUSTED

JETS™ DESCALE OFFERS THE BENEFITS OF RELIABLE PIPING THROUGH ENVIRONMENTALLY FRIENDLY CLEANING AGENTS

Jets™ Descale Plus is the successor to the well-known Jets™ Descale agent, offering improved performance and scale-removing properties.

Prevents and removes scale

Urine scale is a hard substance which forms in piping systems due to a chemical reaction between the calcium in water and urine. A special cleaning agent is needed to prevent and remove such scale.

Jets™ Descale products are specially formulated for this task. They offer a cost-effective way to keep the piping fully operational throughout the life of your vacuum sanitary system.

Jets™ Descale Gel is a new product for smaller piping systems. Its thicker viscosity means it will remain longer in the piping for better results.

Jets™ Descale Plus and Descale Gel are available in several packaging sizes. Use them with our automated dosing units to optimise their effectiveness in any vessel.

Boosting program

In cases where preventive maintenance has not been carried out, there may be severe scale build-up in the piping. These situations require a boosting program to be run for a period of time.

Jets™ Descale products allow customers to easily take immediate action to clean their piping systems.

Contact the Jets™ Service Department for assistance in setting up a boosting program tailored for your vessel.

Also available: Jets™ Toilet Clean for cleaning and disinfection aids in scale prevention and removal. Combine with Descale products for sparkling clean piping.

We take great pride in our extensive knowledge about vacuum piping systems. With more than 25 years of experience in vacuum sanitation, we are highly aware that keeping your piping system free from scale build-up is the key to both high performance and trouble-free operation.

MS Midnatsol sees great improvement

In May of 2012, the Hurtigruten ship MS Midnatsol evaluated the efficiency of Jets™ Descale Plus. By releasing short bursts of Jets™ Descale Plus into the vacuum system at set intervals, the existing scale build-up in the ship's piping was quickly taken care of.

Please ask us for the complete test report to learn all the details of this extremely successful evaluation.

"Considering the relatively short period of testing, the results have been more than we could have hoped for. The surface of the urine scale has gone from hard, to soft and slippery." - Bjørn Andersen, Chief Engineer

"There is no doubt about the effectiveness of this liquid; it works better than anything we have tried before." - Trond Jæger, Plumber and Engineer

1. Hard urine scale in MS Midnatsol's piping was a problem. 2. Treatment with Jets™ Descale Plus proved very efficient.

Automated dosing unit

While Jets™ Descale products can be dispensed manually, we highly recommend our dosing unit for better performance.

An individual may willingly exceed the recommended dose for good measure, whereas this automated unit will only use

the specified amount of Jets™ Descale each and every time. This reduces long-term costs and is beneficial to your piping.

Do not leave this critical task to chance anymore - improve your sanitary system with dosing units!

FROM IDEA TO SUCCESS

Jets™ was founded in 1986 in the unique maritime community on the west coast of Norway, where passion, excellent craftsmanship and the commitment to always do better are centuries-long traditions.

Jets™ is today a market leader. The Vacuumarator™ pump invented by Jets™ revolutionised the industry, and is now the heart of our globally preferred vacuum sanitary system.

We have constantly refined our ideas into solutions that provide practical, reliable and environmentally friendly benefits for the customer, and will always continue to do so.
